1 COMPANY PROFILE AND CONTACTS

1.1 About Bornan

Bornan Sports Technology is one of the global leading companies in sports information technology and digital transformation. Bornan's official headquarter is based in Lausanne, Switzerland, from where all commercial, marketing, and strategic management activities are carried out. The Lausanne office is also responsible for the establishment and nurturing of strategic relationships with International Federations and Sport Associations, amongst other stakeholders.

Bornan's branch, in charge of systems development, event operations and consultancy is in Madrid, Spain. Commercially focused on the Middle East and Asian markets, the Doha office, in Qatar, located within the Al Baraha Tower, manages our rapidly growing events portfolio and business in the region. The Integration Testing Labs and a showcase room for clients is also based there.

Bornan Sports Technology relies exclusively on highly qualified staff with vast experience in the sports IT field, having participated in multiple Olympic & Paralympic Games, Asian Games, Pan-American Games, Commonwealth Games, and other multi-sport events. Most of our staff comes from well-known companies in the sports industry many of whom have gathered several years of experience working for Organizing Committees at an Olympic level. This provides Bornan with the know-how and ability to deliver an exceptional standard of quality.

Operational and delivery teams are deployed when required to provide expert consultancy and/or operational on-site support for our systems and services during sporting events.

As a provider of sports technology services, we have solid experience working and integrating with Main Sports Stakeholders in a global basis.

Bornan has successfully delivered world class multisport events, as well as renowned single-sport competitions where IT security and data integrity were elements of critical importance.

Bornan's project management experience and resources ensure a impactful deployment for sport events, embarking Stakeholders from the very beginning of every project. Bornan applies an agile and flexible project management style that allows to integrate multiple approaches, methodologies and project management working resources (i.e., software) to guarantee excellence in the delivery of every project.

Bornan believes that its experience, staff, and successful business cases as technology services provider for major sport events could mean a great benefit for a successful

partnership with IMGA. Bringing an innovative approach, sustainability and rational use of resources while using state-of-art technology to engage new generations of athletes and fans around the world.

1.2 Company Information

As explained earlier, the headquarters of Bornan Sports Technology is in Lausanne at the Maison du Sport International where the Senior Management, Business Director and the Financial Lead are based. Bornan Sports Technology S.L. was founded in 2017 in Madrid, Spain, and is where most of the developers, the PM Director, CTO, and testing labs are located, within office space of over 1000m2. In February 2020, Bornan Sports Technology W.L.L. opened their headquarters in Doha, Qatar to expand the brand to the Middle East and Asia.

Bornan is a robust long-term project with a strong commitment from its current Stakeholders and a solid expansive business plan for the upcoming years.

2 TECHNICAL SOLUTION PROPOSAL

2.1 Overview Of Proposed Technology Solution

Bornan will provide an end-to-end Games Information Systems solution to IMGA either directly or, in certain cases, through its trusted strategic partners.

The Games Management System (GMS) Modules that will be provided are:

- ACR: Accreditations (Pre-Accreditation and Registration)
- SEQ: Sport Entries & Qualifications
- WKF: Workforce & Volunteer Management
- AAD: Arrivals & Departures
- MED: Medical Services
- UNI: Uniform Management
- ACM: Accommodation

The Games Results systems (GRS) that will be provided are:

- Web Results and Mobile Apps System for Android and IOS GameHub App
- Historical Results
- Central Results System and Widgets

2.2 GMS Solution Description

With over 20 years of experience in the sports industry and strong relationships with various federations and Olympic Committees, Bornan has developed a unique Game Management System (GMS) tailored to the evolving needs of our clients and the sector.

Bornan's GMS is a cloud-based SaaS platform designed to support the organization and management of events of all sizes and levels of complexity. The system is built as a three-layer modular architecture, allowing high adaptability through configuration rather than the need for custom development.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

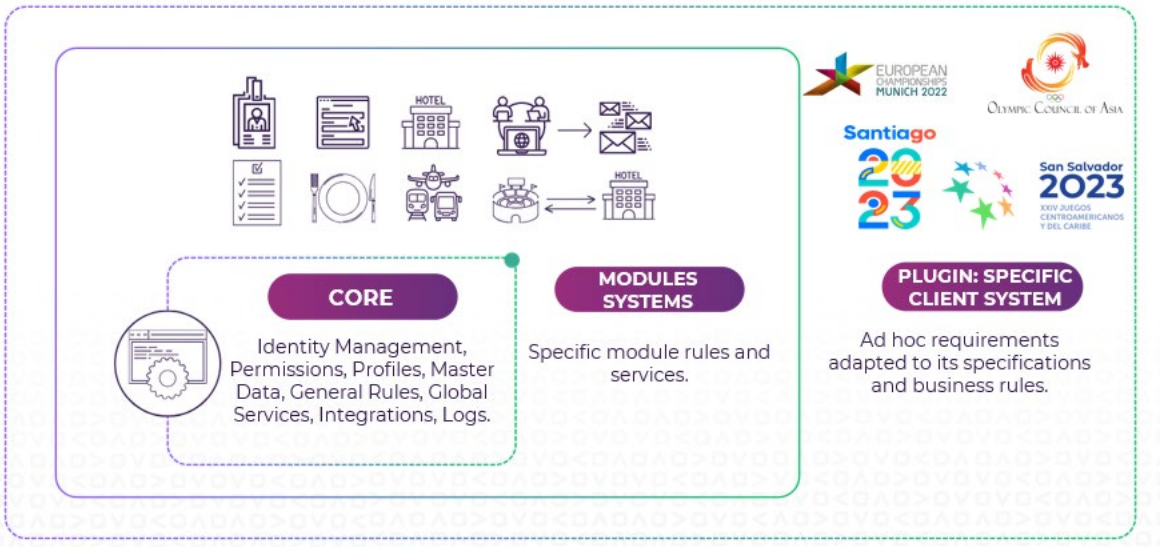

Figure 1: GMS Layers

2.2.1 Common Features

- **Multievent and Multisport:** Possibility of managing multiple events simultaneously (e.g., test events, main events, meetings, courses, seminars, among others) can be managed at the same time. It already handles a vast list of existing configured sports (common sports based on general types of sports) and, if a new sport is required, it is very easy to configure it on the platform.
- **Multilanguage:** The platform supports multiple languages and can be adapted to different linguistic requirements.
- **Modular:** Built with a modular architecture that allows functionalities (e.g., Catering, Access Control, Workforce) to be added or removed. Modules can be activated or deactivated per event or games.
- **Configurable:** Master Data and Common Codes can be defined by users. Administrators can modify forms and rules directly, without needing development team intervention.
- **Multiuser:** Supports multi-user access. A single user can be assigned to one or multiple events and have different roles or profiles for each event.
- **Data Import:** Information can be imported into the platform using preformatted Excel files.
- **Group changes and Bulk edit:** Certain actions and data updates can be performed in bulk, improving efficiency.
- **Data export:** Export configurable reports in PDF and Excel formats directly from the platform.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

- **Responsive:** Optimized for use across all devices, laptops, tablets and smartphones.
- **Integrations:** Seamless integrations between modules and with On Venue Results system via API or through file formats such as Excel file, SDF and JSON.
- **Client branding (white label):** The platform's branding, design and look and feel can be fully adapted to each client's identity.
- **User activity tracking:** Comprehensive logging system that tracks all user actions **within** the platform.
- **Web-based:** Platform fully accessible online 24/7 from any standard web browser.
- **Fully Cloud Based:** Hosted in the cloud for maximum scalability and reliability.
- **Security:** Robust security protocols and regular audits ensure data protection and system integrity.

2.2.2 Modules

2.2.2.1 Accreditation (Pre-Accreditation and Registration)

This is the main module of the GMS. It enables the management of all accredited individuals and their data, including access privileges and the generation of visible badges to authorize entry into specific venues (each participant must first be registered and accepted via the Registration module). It also includes processes for badge generation, printing and distribution.

Key features:

- ACR Matrix Management: Privileges can be managed by roles and areas.
- Role-based workflows: Different workflows can be configured based on each stakeholder's role.
- Security checks: Background check functionality for security purposes.
- Special accreditation types: Support for day passes, upgrade passes, among others.
- Public Forms: Unique URLs can be generated for each form, enabling public access for specific stakeholders (e.g., volunteers, providers) with tailored fields and format, for them to register.
- Individual registration: Participants can register individually and only view their own information.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

Figure 2: Accreditation Example

2.2.2.2 *Sport* Entries and Qualifications

This module manages athlete entries and qualification data for each sport and discipline. It allows individuals and organizations to register participants, manage quotas, and handle name lists for expected competitors.

Key features:

- Phased registration: Supports different stages (e.g., numerical entry, short list).
- Quota management: Control over participant limits per event.
- Sport-specific data fields: Customizable fields for each sport's needs.
- ODF Generation: XML file generation for initial data download into the VRS (Venue Results System).

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

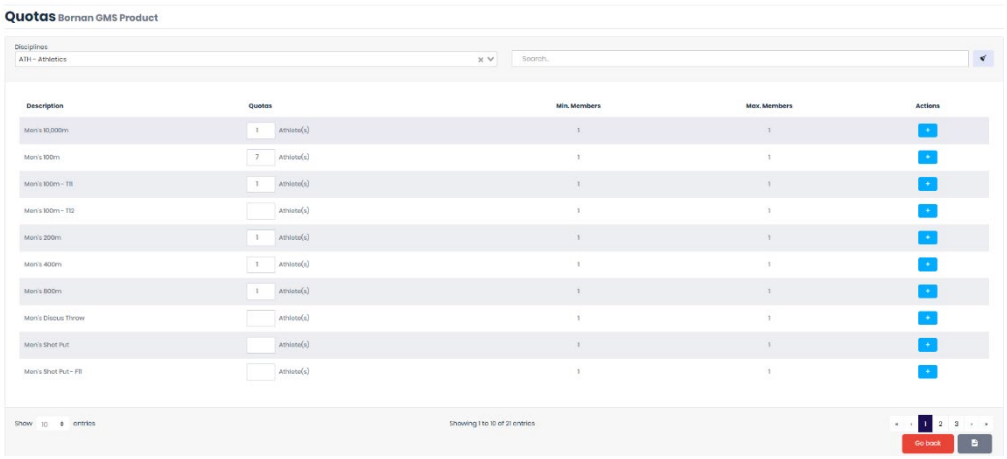

Figure 3: SEQ Module Example

2.2.2.3 Workforce and Volunteers Management

The Workforce and Volunteers Management module enables the efficient management of the personnel and volunteers involved in the event.

Key features:

- Online registration forms (public URL): Allows the collection of all necessary data for each participant group via configurable forms.
- Bulk actions: Includes bulk edit, email sending, search and reporting functionalities (e.g., data export to Excel, PDF)
- Operational management: Supports screening, interviews, role assignments and shifts planning, including check-in processes through the backend.
- Information sharing: Allows targeted communication with specific user groups by sharing dashboards, messages, files, videos, training briefings, surveys and other materials.

2.2.2.4 Arrivals and Departures

Arrivals and Departures module manages all data related to the arrivals and departures of the different Games Family Members to and from the host city.

Key features:

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

- Online data collection: Web interface to capture booking details entered directly by individuals or groups.
- Additional requirements management: Collects information on baggage, sports equipment, special needs, and other logistical elements.
- Group organization: Allows filtering and grouping of travellers for logistical planning.
- Dashboard and reporting: Real-time dashboard and reporting features to support planning and operations.
- Validation processes.

2.2.2.5 *Medical Services*

The Medical Incident Tracking system efficiently supports medical operations during the Games. It allows the LOC's medical team to record patients' medical encounters and flag potential doping candidates. It also allows for detailed searches based on registered patient information.

2.2.2.6 *Accommodation*

The Accommodation module provides a solution to manage all the information related to the accommodation of different groups of participants.

Key features:

- Setup of phases.
- Setup of calendar.
- Setup of event information (room quotas, invoicing).
- Setup of accommodation facilities (hotels, athletes' village, among others).
- Setup of room types, including availability and prices.
- Setup of invoicing templates.

2.2.2.7 Uniform Management

Module to manage uniforms requests, allocation and delivery for specific groups (e.g., staff, officials, volunteers, among others).

Key features:

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

- Warehouse management.
- Item management with size details.
- Stock management by size and location.
- Status tracking to manage stock and delivery process.
- On-the-spot uniform assignment during delivery, based on store and stock availability (no preassigned items).
- Dashboard and reporting (Excel export).

2.2.3 Other GMS Functionalities

The Bornan GMS is a multievent platform that enables the management of a variety of events, including tests, main events, meetings, courses, assemblies, conferences, seminars, and more. Simultaneously, the system enables users to work on multiple events concurrently, with each event stored in a separate database. Bornan could provide GMS for all type of events, including Test Events, Assemblies, and other events if necessary.

Our GMS is accessible from any device and works in all main web browsers, such as Edge, Firefox, Safari, and Chrome (updated to latest version).

GMS platform provides multi-user management functionalities, allowing users to access one or multiple events with either single or multiple user permissions. Additionally, users can be linked to different profiles for each event.

Bornan GMS system offers a comprehensive tracking feature that allows users to access detailed logs of all actions performed.

Our GMS offers data analytics and reporting. For each module, the system has specific reports and graphics that can generate a printable PDF format, calendar overviews, and graphics summary information to access as a shortcut. Also, all views can be exported in different formats: CSV, Excel, PDF or Json.

The Bornan team will provide comprehensive training to key IMGA staff, ensuring their ability to utilize the GMS platform independently.

Integrations to be evaluated when further details are available. Bornan's systems allow integrations with multiple clients and services, as delivered in previous events. Bornan would need to receive information about third party languages and requirements.

2.2.4 GMS Technological Requirements and Assumptions

The following are the minimum recommended requirements for the implementation and optimal operation of Bornan's GMS platform:

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

- Web Browsers & Display: Compatible with all major browsers; Chrome and Firefox (latest versions) are recommended. Our system is designed to be responsive and compatible with any screen size. However, for optimal use, we recommend a minimum resolution of 1366×768. A resolution of 1920x1080 (Full HD) is suggested for accreditation edition.
- Mobile & Access Control: Requires Android/iOS with a camera, updated to one of the two most recent OS versions.
- Internet & Connectivity: A dedicated 300 Mb symmetrical Wi-Fi router is required; VPN use is discouraged due to security restrictions.
- Hardware & Equipment: the LOC is responsible for providing all hardware: computers (Windows OS with internet access), printers, webcams, scanners, phones, data cabling, and all the devices required for access control (e.g., RFID gates, antennas, totems, among others).
- Consumables & Supplies: LOC must provide paper, ink/toner, pouches, plastic cards, heat laminators, lanyards (e.g., RFID-enabled chips and lanyards, among others).
- Payment gateway fees are covered by LOC.
- Integrations with third-party systems will be evaluated based on the details provided by the client. All technical documentation must be shared with Bornan no later than 2 months before the event for S-M size events and 4 months before the events for events size L-XLin accordance with the master project plan that will be built. Bornan's system supports integrations with various external systems, as demonstrated in previous events.
- No additional third-party integrations are included in the scope of this project.
- The following modules are explicitly **OUT OF SCOPE:**
    - Access Control: Access Control module that enables the control and monitoring of access to the various checkpoints (venues, zones, among others). It is web-based software used to scan accreditations, either through a laptop with a scanner or via a smartphone browser using an integrated camera. Access control devices must have a stable connection to function properly, as they verify accreditation privileges in real time.
    - Protocol: Protocol is an efficient VIP management support system that provides comprehensive services for VIP guests, including the management of participating VIPs and their accompanying guests.
    - Access control is handled via accreditation barcode/QR codes. PDF ticket generation is also included.
    - Catering: Module to manage meal bookings and allocate catering tickets for different organizations and people. Access to catering is controlled using the accreditation barcode/QR code. Catering tickets may be included within the accreditation itself.
    - Voting: Module that enables the creation of surveys and voting processes, allowing registered participants to access and submit the preferred choice from the available configured options. Previously used for the Athletes Commission election in the Pan American Games 2023.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

- Rate Card: Rate Card Order Portal manages all items in a catalog format and enables users to search, select, order and issue invoices. The system allows users to: easily browse and search for various items, submit purchase orders, and track the full process of purchase orders from request to approval and invoicing.
- Reports: The following reports will be built and provided after the closure of the event:
  - Register (REG): high-level reports regarding number of registered participants and sorting by organization/categories.
  - Accreditation (ACR): reports regarding generated accreditations, versions, among others.
  - Sport Entries and Qualifications (SEQ): Overview of sport entries by event and participant, including changes and quotas.
  - Accommodation (ACM): Summary of all accommodation booked for delegations, athletes, and officials. Details of room assignments by hotel, including check-in and check-out dates.
  - Arrivals and Departures (AAD): Schedule of arrivals and departures linked to accommodation bookings
  - Medical (MED): detail of all the assistance provided to participants who experienced health issues during the sports event.
  - Uniforms (UNI): Summary of all uniforms delivered to athletes, officials, and workforce, linked with the stockage by size, type and category.
  - Other reports will be jointly evaluated based on events and client needs, with mutual agreement from both parties.

For improved service, in primary locations (such as accreditation centre or TOC) public IPs from where GMS will be accessed can be shared with Bornan to whitelist these locations and ensure services will work.

2.2.4.1 GMS Staffing, Operational and Logistics Requirements and Assumptions

The following operational and logistics requirements and assumptions apply to this agreement:

1. Release Management

   a. As Bornan, we aim to work with the highest efficiency and performance, based on agile frameworks as we know how events may require flexibility while also sustaining a strong structure and pace. This is why our standard release frequency is 1 technical release per week for those requirements that require technical development, and not only platform configuration. This is ideally scheduled between Tuesdays and Thursdays.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

b. Releases are not scheduled on Fridays or weekends to ensure full support availability both from Bornan and the organizational LOC.
c. Hotfixes (i.e., critical bug fixes) may be delivered between Monday–Thursday, depending on urgency and impact (e.g., issues that block operations or usability have the highest urgency, naturally).

- Staffing. Operations & Training:

d. Operations Staffing: LOC is responsible for providing and assigning all operational personnel needed for the day-to-day management and operations of all the different GMS modules configured. Likewise, the personnel in the accreditation centers that register, accredit and print the cards as well as personnel to validate the access privileges and general logistics.
e. Training: Bornan will provide fully comprehensive training to key IMGA or LOC's staff to ensure independent GMS system use. The LOC must assign and ensure attendance of relevant staff at all training sessions.
f. Support Staffing:

i. Bornan will guide and support the client in doing the initial configuration and solve platform related issues before and during the event. Bornan's expertise guarantees smooth operations and seamless coordination across all competition venues.
ii. Coverage: Depending on the size of the event, it comprises the number of days (defined in the technical proposal) before the games + Days of Event.
iii. Support hours: Standard support hours will be from 8 AM (UTC +1) to 5 PM (UTC +1) during the pre-event configuration phase. Any request for additional or extended support will be evaluated together with the LOC and agreed formally.

2.3 Web Results and Mobile Apps System

The Bornan Web Results System (WRS) is a robust solution for displaying schedules and results in multi-sport competitions, built on years of experience delivering high-performance platforms. Fully responsive and multilingual, WRS ensures an intuitive user experience across all devices.

Security and speed are guaranteed through a global CDN, reducing latency, improving SSl handshake times, and protecting against DDoS attacks. A Web Application Firewall (WAF) adds an extra layer of defense by blocking malicious traffic.

Independent audits, such as the Mozilla Observatory, confirm WRS's excellent security and performance ratings.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

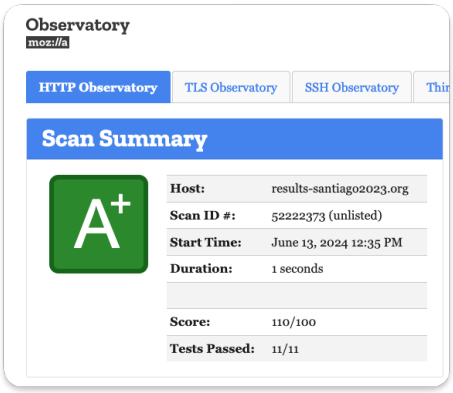

Figure 4: Bornan WRS Scan (Mozilla Observatory)

As a Bornan product, WRS is built in a high availability architecture and is designed to scale instantly to meet peak demand.

The platform is fully customizable to match IMGA's look and feel, including logos, sponsors, and additional navigation elements as required by the organization. It offers multiple result views (by day, by discipline, or live events) with live events highlighting competitions currently running or about to start. Users can access comprehensive data such as calendars, NOCs, records, medal standings, venues, disciplines, and official reports. Advanced search and filtering make navigation effortless, while linked content allows users to move seamlessly between medal tables, athlete profiles (note: athlete biographies are not included in the quotation), teams, and event details. The system works perfectly on mobile browsers and provides dedicated applications for Google Play and Apple App Store. Once published, these apps update automatically without user intervention, ensuring users always have the latest version. Apps are personalized according to the Games' look and feel and can include additional buttons or links based on LOC requirements. Games logos and sponsor branding are integrated throughout.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

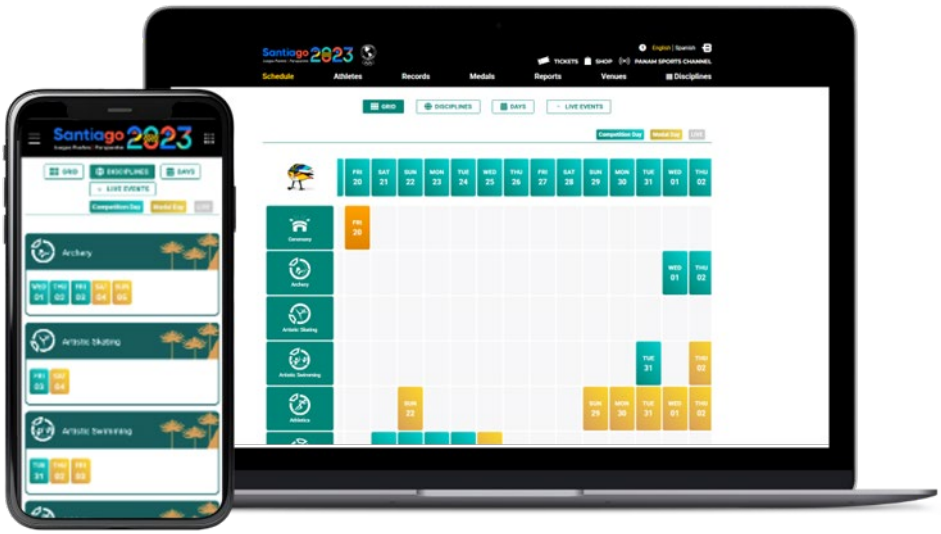

Figure 5: WRS Example A

The WRS landing page is organized into four main views: traditional grid view, by day, by discipline and live events. All content is interconnected. For example, from a medal search, users can navigate to an athlete's profile and then click through to event results, creating a smooth and intuitive experience.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

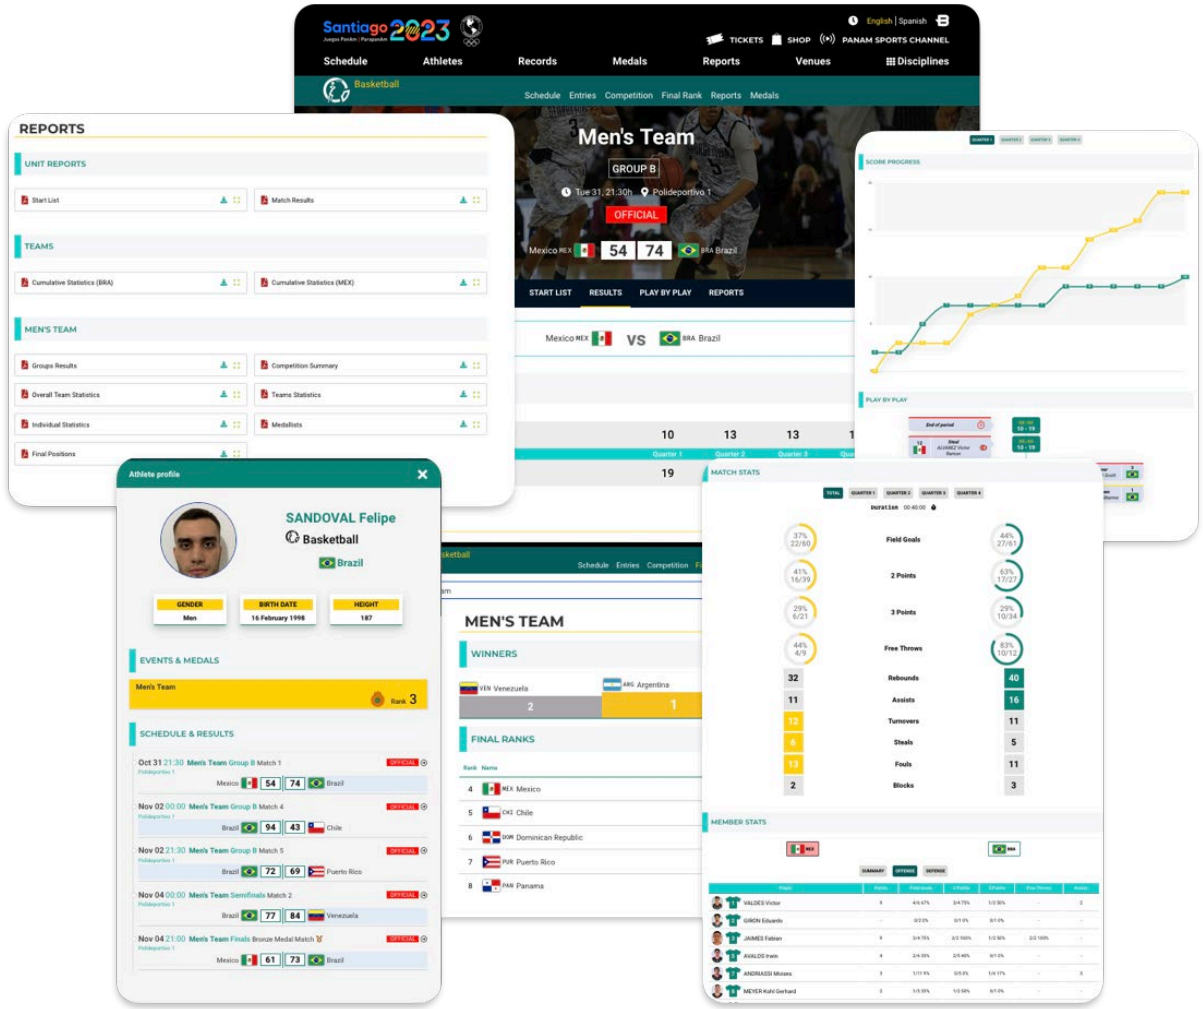

Figure 6: WRS Example B

WRS includes all competition information: calendars, athletes and teams, NOCs, records, medal standings, reports, and venues. Focusing on results, it provides team and athlete stats, partial scores, official reports, and final rankings. All official reports are available in PDF format, which can be viewed online or downloaded. Users can search and filter reports directly from event results, and full result books are published at the end of the competition.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

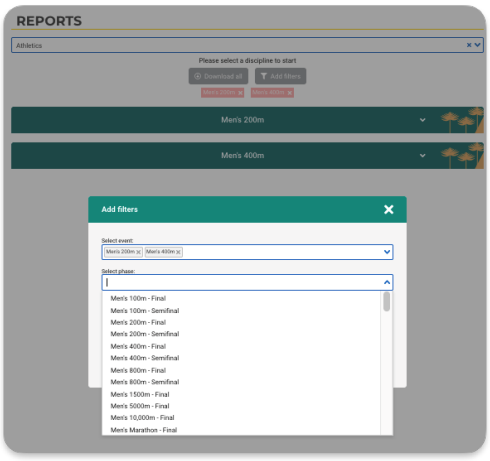

Figure 7: WRS Filter Example A

Users can perform detailed searches, such as filtering medal standings by NOC, day, discipline, medal type, or gender.

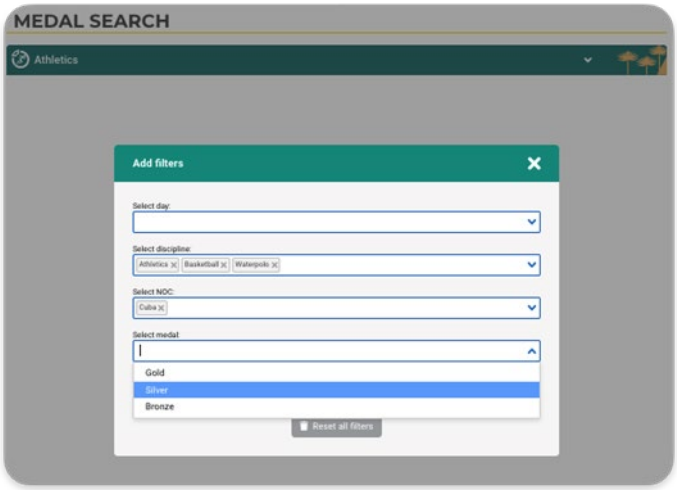

Figure 8: WRS Advanced Search Example

.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

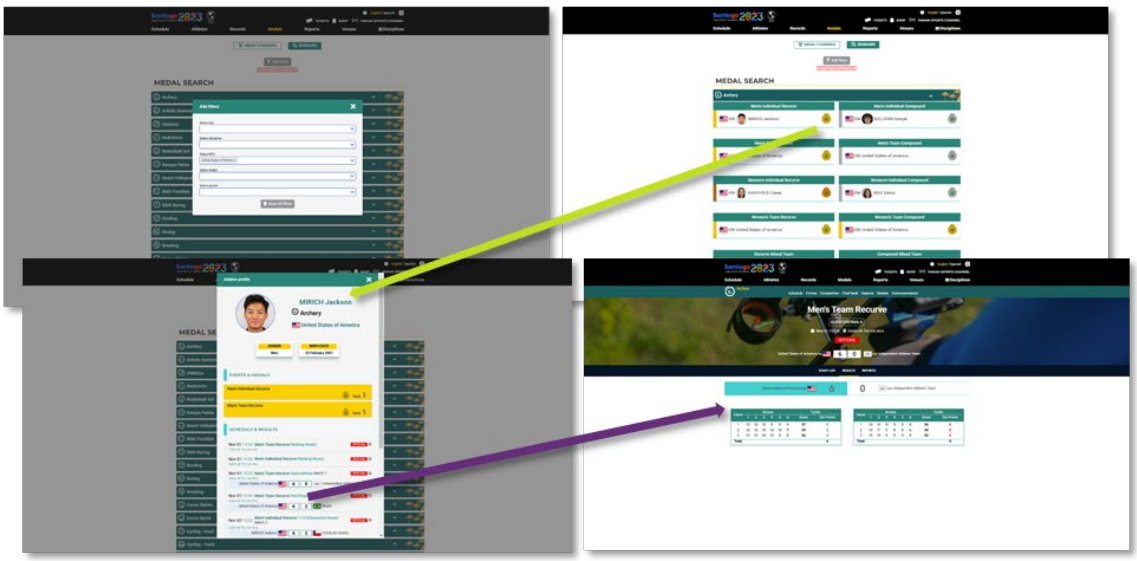

Figure 9: WRS Navigate Example

WRS also offers a set of embeddable widgets for external websites. These widgets allow medal tallies, upcoming events, and latest results to be displayed using a simple code snippet. Data updates automatically, ensuring real-time accuracy. Widgets can be hosted on official websites or partner platforms for extended reach.

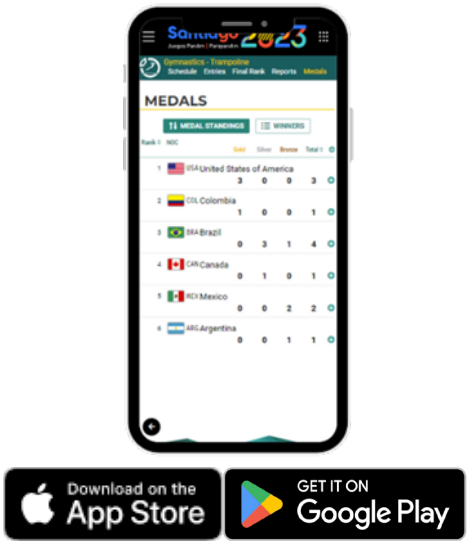

Figure 10: Mobile App System

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

2.4 GamesHub App

The Bornan GamesHub is the essential mobile and web application for accredited participants during the Games, designed to centralize all event-related information and services in one convenient place. It is the go-to solution for athletes, volunteers, officials, media, and organizers, providing a personalized experience based on accreditation and role.

Through GamesHub, users can access their digital accreditation card, including venue access levels and authorized zones, as well as details about accommodation, arrival and departure schedules, and available services. The app also delivers complete Games information, including competition schedules, live results, venue details, medal standings, and a personalized list of favourites for quick access to preferred sports, athletes, or events. In addition, GamesHub features news and official press releases, keeping participants informed of announcements and updates, and provides real-time weather conditions to help plan the day.

GamesHub integrates seamlessly with Bornan's ecosystem, offering single sign-on (SSO) for secure authentication, multi-language support, and customizable notifications. By consolidating everything into one platform, GamesHub ensures that accredited participants have instant access to the right information at the right time—making it the easiest and most reliable way to stay connected during the Games, all from your mobile device.

2.5 Historical Results

Bornan has extensive experience in managing historical results for sports organizations, providing end-to-end solutions that ensure data is preserved, standardized, and easily accessible. Our ecosystem of partners has relied on Bornan's expertise to digitize, normalize, ingest, and deliver historical data through advanced digital services.

BORNAN SPORTS TECHNOLOGY

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

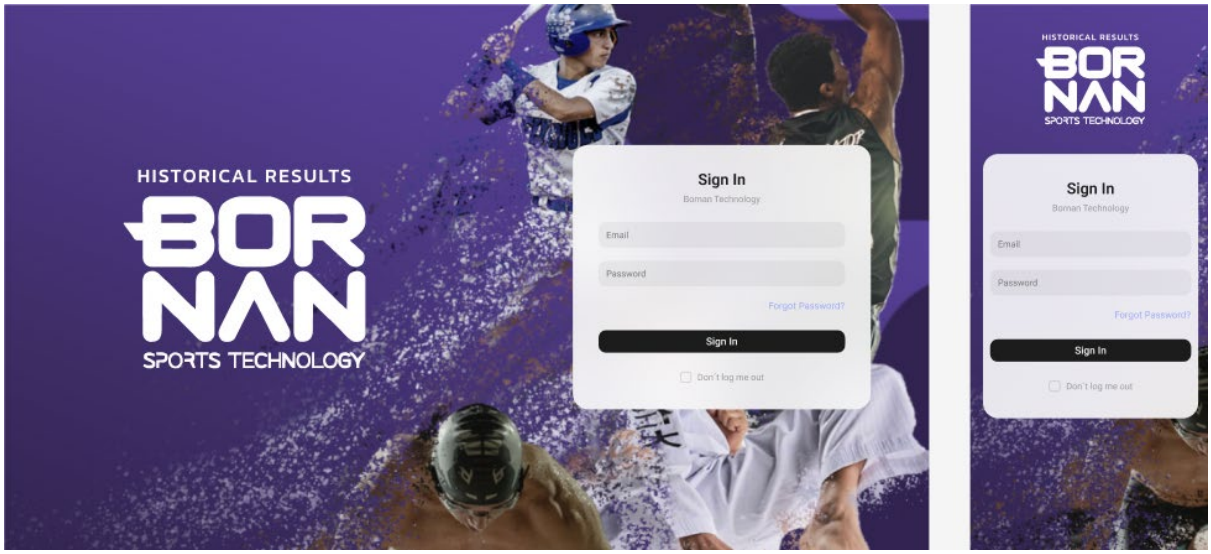

Figure 11: Bornan's Historical Results' Login Page for Both Web & App

This service is divided into different phases:

1. Data Digitization

Bornan begins by converting historical results from physical formats (e.g., paper documents) or unstructured digital files (e.g., Excel sheets, PDFs) into a standardized digital format suitable for further processing. This foundational step ensures all data is ready for integration.

2. Metadata Creation

We design adaptable data models that encompass all long-term requirements of the organization. These formats ensure that valuable information is stored efficiently and can be retrieved easily for future use.

3. Normalization

Leveraging our experience, we create relational data formats that facilitate long-term usability. The normalization process transforms all sources into the chosen metadata format, tailored to the organization's specific needs. This guarantees quick access and supports future data ingestion.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

4. Service Delivery

Once digitized and normalized, Bornan provides three types of services:

- **Raw Database**: A comprehensive database for internal storage and management.
- **B2B Portal**: A secure portal displaying historical results for stakeholders such as LOCs, NOCs, and media.
- **Digital Widgets**: Customizable widgets designed for integration into websites and other digital outlets.

5. Monitoring and Future Data Ingestion

Bornan ensure ongoing management by ingesting data for future events, keeping the database current and comprehensive. Continuous monitoring guarantees that all new data is accurately captured and integrated.

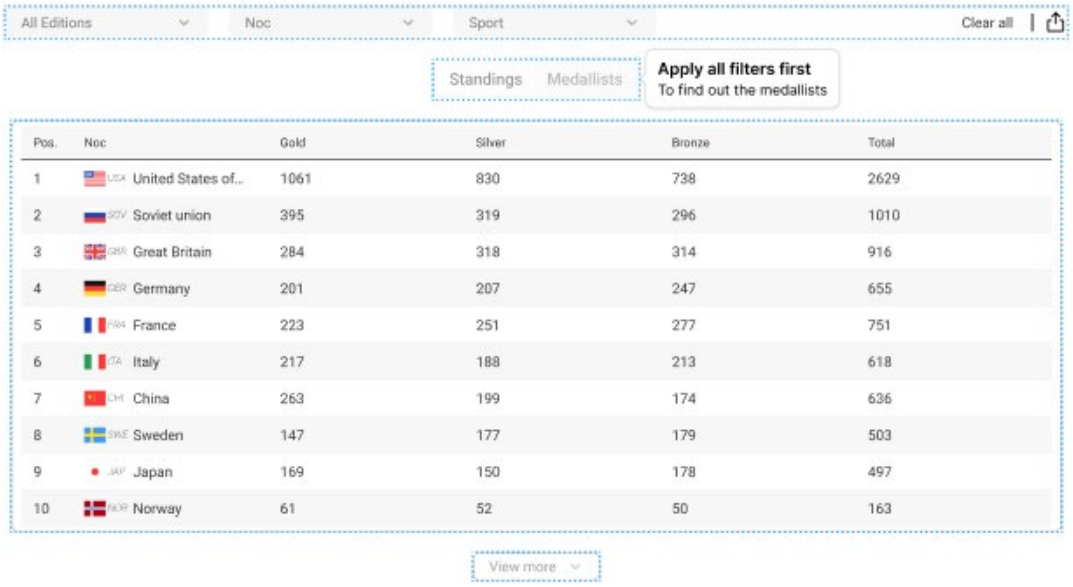

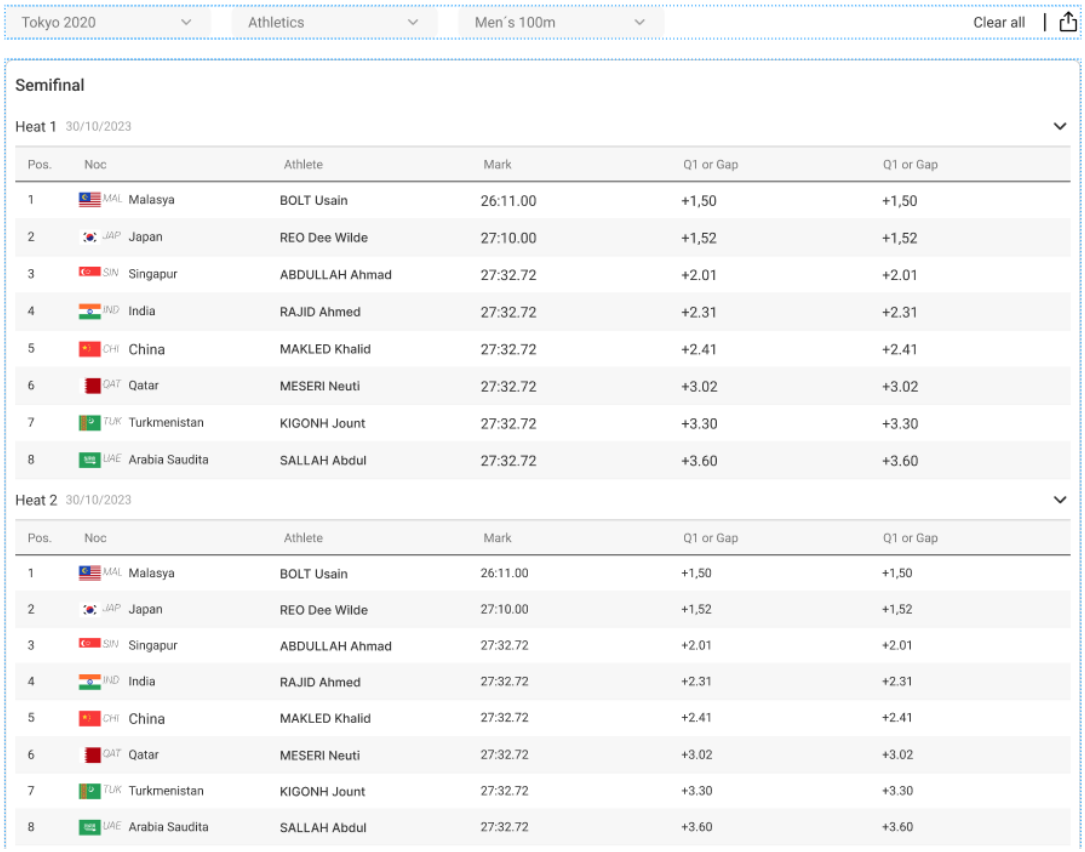

Figure 12: Bornan's Historical Medal Results Portal

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

Figure 13 Example of Bornan's Historical Results

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

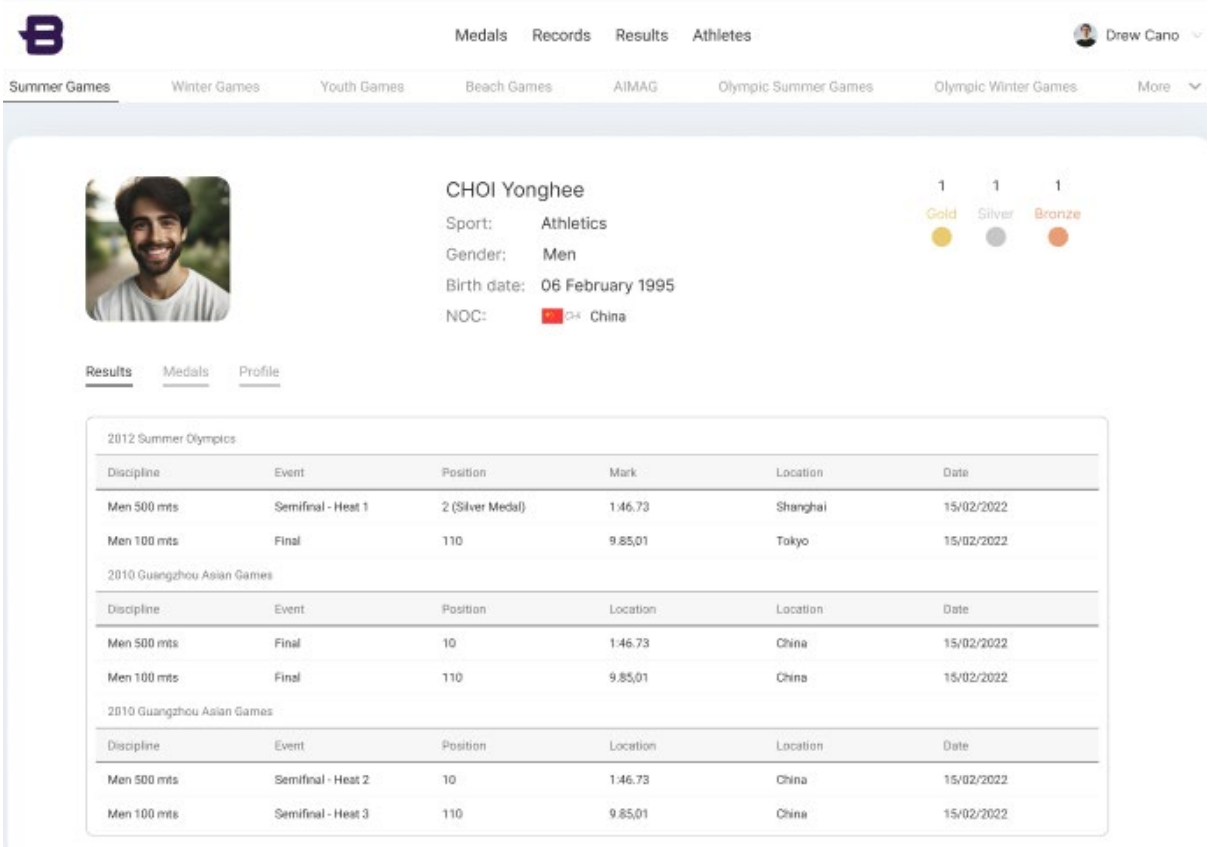

Figure 14: Athlete Profile in Bornan's Historical Results System

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

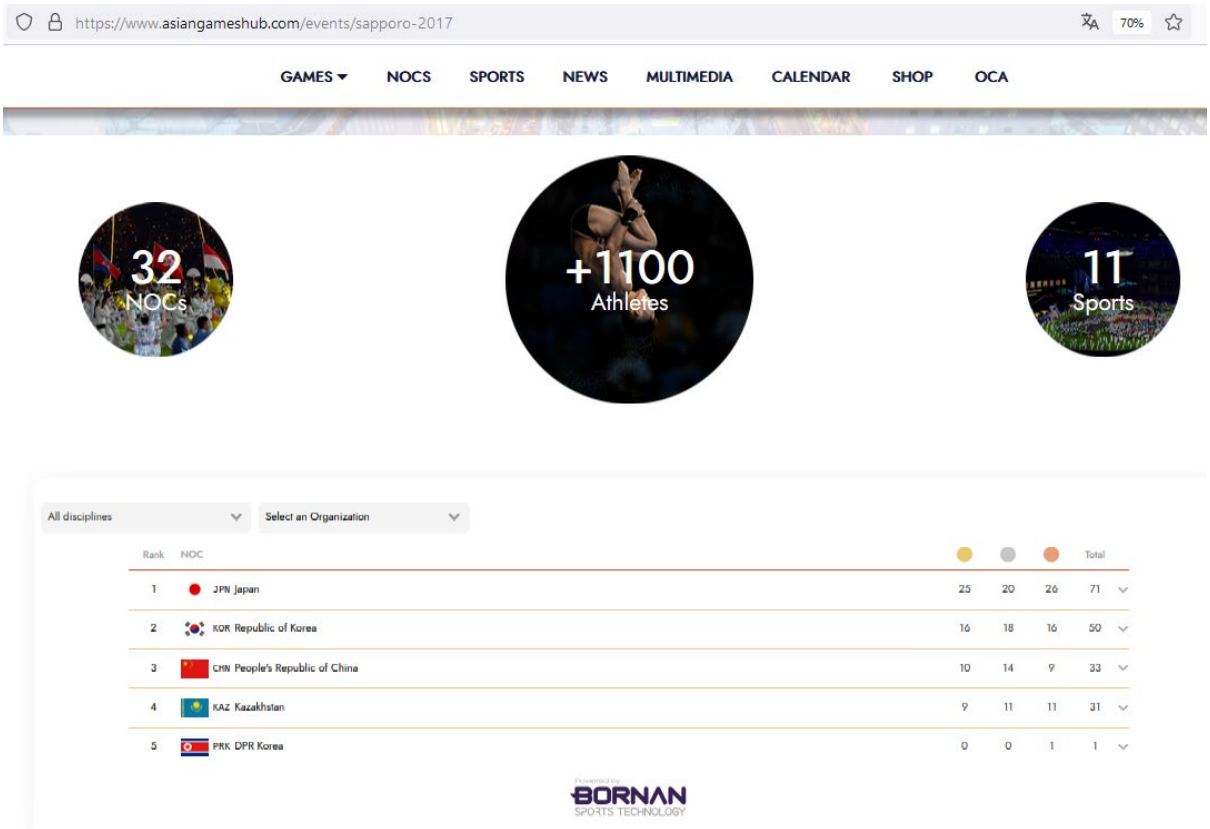

Figure 15: Widgets Integration from Bornan's Historical Results, OCA OTT Platform.

2.6 Central Result System (CRS)

The Central Results System is the piece of the GRS in charge of connecting the different venues with other IT services to transmit competition information such as results, schedule etc. The systems connected to the CRS are GRS (only for the initial download), VRS (Not provided), WebResults, and GamesHub. Additionally, third-party organizations may subscribe to receive data streams from the various VRS directly through the CRS, which will handle message exchange in SDF format for both Bornan's system and third parties.

VRS offers a real-time interface in SDF (Sport Data Feed in JSON format) for all sports and disciplines. The system automatically transmits all relevant data (schedules, entries, start lists, live data, results, records, medals) from VRS to the CRS system in real time.

Printouts (in PDF format) will also be sent to the CRS encapsulated in SDF (JSON messages).

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

All transmissions, both data and printouts, will be sent simultaneously over two lines (main and backup) if provided by IMGA. Queuing systems will manage the sending process.

Through a secure web page, each customer can specify and manage subscriptions to the messages they wish to receive (e.g., all messages or only swimming medal messages) and request feed on demand (FOD). With FOD, customers can download a set of messages or have them sent to their endpoint in real time based on a specified query.

2.7 Process of Testing

Bornan, as a leading provider of Information Technology (IT) services, is committed to delivering cutting-edge solutions that seamlessly integrate Games Management Systems, Central Results Systems, Venue Results Systems, and Timing and Scoring Systems. We recognize the importance of rigorous testing in ensuring the reliability, accuracy, and seamless performance of our systems during events.

Our testing process serves several critical purposes:

- Functional: Validation that each component operates as expected.
- Validation: We ensure that each component —whether the Games Management System, Central Results System, Venue Results System, or Timing and Scoring System— functions as intended by thoroughly executing and reviewing test cases.
- Stress and Security Testing: We conduct Performance and Security Testing to ensure our systems remain reliable and efficient. We validate speed, scalability, and stability under real-world conditions. We rigorously assess vulnerabilities to strengthen defenses against evolving threats. We safeguard sensitive data and enforce compliance standards. Together, these measures guarantee secure high-performing solutions for our customers.
- Integration Testing: We verify that different modules work harmoniously together, ensuring seamless data flow and synchronization. Ensuring seamless integration and efficient data transfer with third-party systems

GMS User Acceptance Test (UAT) and incident management

The GMS Modules, as part of the GMS Platform, undergoes rigorous validation well before the production environment goes live, ahead of the start of the event. This validation is carried out through a User Acceptance Test (UAT) process, in which the functionalities defined by the client in collaboration with Bornan are documented in detail, from the most general to the most specific. Each functionality is listed with the steps required for its

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

validation. Once the UAT template is created, the client is responsible for verifying that every functionality works as expected, ensuring the overall quality of the Games Management System.

During the live phase of the event, given that the GMS has been operational for months in advance, any incidents that arise must be promptly registered in our issue-tracking tool. Our dedicated team will address these according to the established response times, ensuring seamless functionality during the critical production phase.

2.8 Hosting, Data Security, And Back-Up Architecture

Bornan performs a Comprehensive Legal Compliance and Information Security Program. This program represents a fundamental commitment to data protection, legal compliance, and operational resilience in all our activities. It underscores our dedication to safeguarding the integrity, confidentiality, and availability of our data and ensuring that we operate within the bounds of applicable legal frameworks.

2.8.1 Program Scope

Our Comprehensive Legal Compliance and Information Security Program covers several key areas to ensure robust data protection and legal adherence across all our operations:

1 Implementation of the Information Security Management System (ISMS) based on ISO 27001: Adopting the ISO 27001 standard ensures that we systematically manage sensitive company and customer information, securing data through a comprehensive set of controls and measures.
2 Compliance with privacy and data protection regulations, including GDPR and other local laws: We are committed to adhering to the General Data Protection Regulation (GDPR) and other relevant local data protection laws, ensuring the privacy and rights of individuals are respected.
3 Development and implementation of information security policies, procedures, and controls: We have developed a comprehensive suite of policies and procedures to guide our information security practices.
4 Implementation of security measures in technological infrastructures to ensure comprehensive protection: Our technological infrastructures are fortified with advanced security measures to protect against various threats and vulnerabilities.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

2.8.2 Program Components

2.8.2.1 Information Security Management System (ISMS)

- Development of information security policies and procedures: We have established a robust framework of policies and procedures that guide our information security practices across the organization. These policies are designed to address various aspects of information security, ensuring consistency and compliance.
- Information security risk assessment and management: Regular risk assessments are conducted to identify potential security threats and vulnerabilities. Based on these assessments, we implement appropriate risk management strategies to mitigate identified risks.
- Implementation of security controls to protect data confidentiality, integrity, and availability: Our security controls include technical, organizational, and human measures to ensure that data is always protected. This includes encryption, access controls, and regular security training for staff.

2.8.2.2 Legal Compliance

- Research and evaluation of applicable national and international regulations: We continuously monitor and evaluate national and international regulations relevant to our operations. This monitorization ensures that we are always aware of and compliant with the latest legal requirements.
- Adapting policies and procedures to comply with legal regulations, including GDPR and other local laws: Our policies and procedures are regularly reviewed and updated to ensure they comply with applicable laws, particularly those related to data protection and privacy.

2.8.2.3 Business Continuity Management (BCMS)

- Development of business continuity plans and incident response: We have developed comprehensive business continuity plans that outline our response to various incidents and disasters. These plans ensure that critical business functions can continue with minimal disruption.
- Regular disaster recovery testing and exercises: We conduct regular disaster recovery tests and exercises to evaluate the effectiveness of our continuity plans and ensure our readiness to respond to incidents.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

- Continuous monitoring of the effectiveness of business continuity plans: Our business continuity plans are regularly monitored and reviewed to ensure they remain effective and relevant.

2.8.2.4 Security in Technological Infrastructures

- Implementation of security measures in technological infrastructures: We have implemented a range of security measures to protect our technological infrastructures, including firewalls, intrusion detection systems, and regular security assessments to identify and address vulnerabilities.

2.8.2.5 Specialized Human Resources

- Specialized team in information security and legal compliance: We have a dedicated team of experts in information security, legal compliance, and business continuity. This team is responsible for overseeing the implementation and maintenance of our security and compliance programs.
- Ongoing training and development: Continuous training and development programs are conducted to ensure our team is always up to date with the latest regulations, technologies, and best practices in security and compliance.

2.8.3 Ongoing Compliance

We are committed to maintaining compliance with legal regulations and information security standards through a continuous improvement approach. Regular evaluations of the program, compliance reviews, and updates to policies and procedures will be conducted to ensure we continue to meet the highest standards.

2.8.4 Conclusions

The Comprehensive Legal Compliance and Information Security Program at Bornan Sports Technology is a testament to our commitment to data protection, legal compliance, and operational resilience. We are dedicated to continually improving and evolving our program to stay at the forefront of best practices in information security and legal compliance.

In addition, Bornan has been **awarded as an AWS partner** passing a successful functional technical review with Bornan GMS product which means that it follows the high standards of security and high availability recommended by AWS.

2.8.5 Infrastructure

Most of Bornan's projects are stored in Amazon Web Services (AWS). We've chosen to use this cloud provider for several reasons:

- Security: AWS utilizes an end-to-end approach to secure and harden their infrastructure, including physical, operational, and software measures.
- Reliability: With AWS, we are using the same virtual backbone as Amazon's multi-billion-dollar online business that has been honed for over a decade.
- Scalability: Applications built on AWS components can scale up or down based on demand. Backed by Amazon's massive infrastructure, we have access to compute and store resources when they are needed.
- Power: Dozens of high-powered tools already exist in the AWS ecosystem, such as for backups and load balancing. This allows us to focus on our product and in developing new features.
- Availability: AWS has a worldwide presence, allowing us to deploy our systems in any location that is most convenient for our clients.
- Use of CDN: By using AWS CloudFront, delivery of static and dynamic content is accelerated and globally distributed through edge locations, reducing latency and enhancing performance. Additionally, robust security features are included like DDoS protection, HTTPS encryption and integrating Web Application Firewall (WAF). CloudFront ensures high availability with built-in redundancies and automatic failover.

2.8.6 Security

- OWASP Best Practices: Our developers are constantly following OWASP best practices, ensuring that the code is secure (https://owasp.org/)
- Virtual Private Cloud (VPC): Our instances are deployed in private networks where we configure firewall rules to allow only connections to our servers to authorized users.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

- Identity and Access Management (IAM): Every action done is registered and we can granulate access to ensure that the users can only modify what they have permissions for.
- Web Application Firewall (WAF): Security rules are applied to our cloud resources, monitoring web traffic and protecting them from attacks.
- DDoS protection: Bornan uses services such as AWS CloudFront, Route 53 and Application Load Balancer in all their cloud services mitigating the impact of service attacks.
- Thread Intelligence: Thanks to our relationship with our external partner, we can anticipate new attacks and threats.
- Intrusion Protection System (IPS): A system to protect non authorized access and signs of possible attacks thanks to network traffic analysis.
- Monitoring: Custom alerts and monitorization of the state and performance of the servers and network, allowing us to detect bottlenecks or problems.
- Encryption: We encrypt all our external communications in transit and the whole database or all data sensitive fields at rest.
- Business continuity: Depending on the project we adopt different measures that go from daily backups to high availability with redundancy in separate datacenters with continues backup systems.
- 3 Tier Architecture: Our products separate applications into three distinct layers: presentation layer, application tier and data tier. By doing this, we promote modularity, scalability flexibility and high availability.

Databases: Following this 3-tier architecture, our databases are deployed independently with autoscaling and high availability; communication between our applications and databases are encrypted in transit. Databases and backups are encrypted at rest.

2.8.7 Data Security

- Data Protection Measurement: Personal Data Protection Management System through which a series of technical and organizational measures are applied. Partners with leading expert companies: Prodat and Exceem.
- Alignment and collaboration: Bornan's policies align with the Data Controller's Privacy Policy, with services provided under a "Treatment Order Contract" where Bornan assists in rights response, breach management, and may conduct Privacy Impact Assessments.
- Data Handling: Bornan commits to returning/deleting processed data upon the Data Controller's request and adheres to limited data retention principles.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

2.8.8 High Availability

Bornan applications are designed to be cloud native, with auto-scaling, self-healing, and resiliency as the foundation of our applications.

- High availability: Processes are in different availability zones. In case a zone is unavailable, other processes Will work in others availability zones.
- Self-healing: Processes are reviewed every 30 seconds to be sure instances are working. In case an instance is unhealthy, it is automatically replaced with a healthy new one.
- Auto-scaling: Depending on demand, processes are scaled to fill up requests. This auto-scaling procedure is also applied to our database, making the system fast and reliable.

2.8.9 Observability

Bornan uses real-time log data for dashboards and log analysis.

- Advanced logging: By deploying comprehensive log data, monitoring processes continuously analyze and detect anomalies in application behavior, triggering automated notification mechanisms to alert system administrators of potential issues, thereby enabling swift incident response and minimizing downtime through proactive detection and mitigation.
- Graphical Dashboards: Visualizing critical infrastructure metrics through intuitive graphical dashboards, system administrators gain real-time insights into hardware performance, cloud utilization, and application workload, empowering data-driven decision making on capacity planning, resource optimization, and problem resolution by monitoring key indicators such as CPU usage, memory consumption, and network traffic.

3 IMPLEMENTATION PLAN AND TEAM STRUCTURE

The project consists of three distinct phases, each requiring specific tasks and involving different staff members. These phases are:

- Pre-Event
- Event
- Post Event

3.1 Pre-Event

This phase establishes the foundation to ensure the system is fully tailored to the event's operational and security requirements. The solution will be configured with event branding, accreditation categories, and role-based access controls, and integrated with existing databases, venue access systems, and hardware. A structured test plan will validate every function under real-world conditions. Dedicated remote technical support will be available to resolve issues promptly, ensuring the system is fully operational before the first participant arrives. For the first event, Bornan requires on-site staff. On-site services will be quoted separately as outlined in the offer. We recommend contracting these services through the provided rate card, with on-site support commencing one month prior to the event.

3.2 Event Phase

During event operations, Bornan's staff will ensure that its systems will be maintained at peak performance through continuous on-site technical presence, ensuring uninterrupted service and the highest standards of security and operational control. Real-time updates will accommodate last-minute changes to personnel, teams, or access permissions. While daily operational reports and scheduled data exports will keep the LOC / IMGA, security teams, and stakeholders fully informed.

In the event of an incident, response protocols agreed with the LOC / IMGA under established SLAs will be activated according to severity. Bornan will utilise Monday.com as the dedicated issue-tracking platform, following the same proven approach applied during the pre-event phase with the LOC's / IMGA's functional areas. This cloud-based system enables real-time data collection, progress tracking, and feedback management, with a user-friendly interface that supports prompt issue logging and resolution, as well as effective collaboration across teams. Should the LOC / IMGA designate an alternative tool, Bornan will seamlessly adapt to ensure full integration with local processes.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

Main ongoing activities:

- Operational support
- Monitoring

3.3 Post-Event Phase

Following the tournament, the focus shifts to secure system closure and comprehensive data handover. A complete, verified export will be delivered in agreed formats, alongside any final ad-hoc reports or analytics. All user accounts will be deactivated, sensitive data will be securely purged in compliance with applicable data protection regulations, and any deployed hardware will be returned or decommissioned. A formal closure report will document system performance, highlight lessons learned, and provide actionable recommendations to enhance future events.

3.3.1 Overall Organization Chart

Each level of this organisational chart is designed to maximise efficiency and ensure the achievement of set objectives. Our structure is defined as follows:

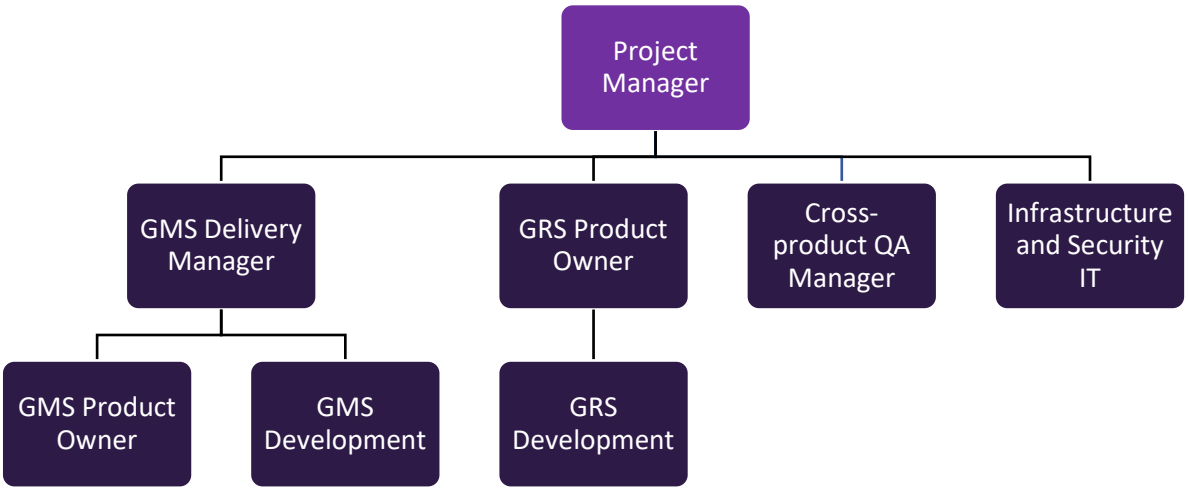

Figure 16: Organization Chart

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

This general organization chart is adapted to each of the different project phases as described below.

3.3.2 Pre-Event

In this phase the main roles are:

Project Manager (PM) is responsible for leading the project team to achieve agreed objectives and deliver value to stakeholders. This role applies proven project management knowledge, skills, tools, and techniques to ensure delivery within the defined scope, schedule, budget, quality, and risk parameters. The project manager acts as a steward of resources, fosters a collaborative and high-performing team environment, engages effectively with stakeholders, and tailors the project approach to its context to optimize outcomes.

GMS Product Owner (GMSPO) is responsible for guiding the strategic direction, functionality, and continuous improvement of the Games Management System. They validate and prioritize new feature requests, ensuring alignment with operational goals, user needs, and long-term vision. The role oversees the product roadmap, manages stakeholder expectations, and safeguards the overall design to deliver a secure, intuitive, and high-performing system. By balancing short-term demands with strategic enhancements, the GMSPO ensures the product delivers maximum value throughout the tournament lifecycle.

GMS Demand and Delivery Manager (GMSDDM) is responsible for gathering client needs and defining tailored solutions in collaboration with the Product Owner. Oversees operational delivery of the GMS, ensuring service quality, incident resolution, and SLA compliance throughout the pre-event phase. They act as the primary point of contact for delivery and operational issues.

GMS Development (GMSDEV) is responsible for translating approved requirements into functional, high-quality features. Their work includes implementing new capabilities, performing regular platform updates to enhance performance and security, and resolving software defects to ensure system stability. By maintaining and improving the codebase, they ensure the platform remains reliable, user-friendly, and aligned with evolving operational needs.

GRS Product Owner (GRSPO) defines the strategic direction of the Games Results System, including WRS and Historical Results. They validate requirements, prioritize features, and ensure integration with accreditation systems and schedules. The role focuses on aligning functionality with operational goals and preparing the platform for high availability and security before launch.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

GRS Development Team (GRSDEV) implements approved features, integrates APIs, and configures widgets for external platforms. They conduct rigorous testing, optimize performance, and ensure multilingual support and responsive design for web and mobile applications.

Infrastructure and Security IT (IT&SEC) is responsible for safeguarding the platform through robust cybersecurity measures, ensuring protection against threats and maintaining compliance with security standards. They continuously monitor the health and performance of the underlying infrastructure, proactively addressing issues and scaling resources as needed to guarantee stability, availability, and optimal system performance during all phases of the event.

Quality Assurance Manager (QAM) is responsible for ensuring that all project deliverables including services, documentation, and system outputs meet the agreed quality standards and requirements set by Bornan and the client. This role establishes and implements quality management processes, conducts regular reviews and audits, and proactively identifies potential defects or non-conformities. Working closely with cross-functional teams, the QAM facilitates timely corrective and preventive actions to resolve issues, maintain compliance with organizational and contractual standards, and promote a culture of continuous improvement throughout the project lifecycle.

3.3.3 Event

Remote Project Manager (PM) leads the on-site project team to ensure all event operations are delivered on time, within scope, and to the agreed quality standards. They will coordinate multiple workstreams in real time, proactively resolve issues, manage risks, and reallocate resources to maintain uninterrupted service. Acting as the central contact for all stakeholders, the project manager will ensure clear communication, rapid decision-making, and seamless execution throughout the tournament.

On-site GMS Delivery Managers (OsGMSDM) is responsible for overseeing the end-to-end delivery and operational readiness of the GMS at the event location. They act as the primary on-site point of contact for delivery matters and coordinate closely with local teams, LOC, IMGA and stakeholders, providing real-time updates on status, risks, and issues. The role safeguards quality and compliance by verifying deliverables against defined standards, facilitating formal reviews and approvals, and ensuring the system performs reliably throughout the event.

On-site GMS Development Manager (OSGMSDV) ensures the GMS operates smoothly and without disruption during the event. Their primary focus is rapid problem-solving e.g. diagnosing and resolving technical issues, fixing software defects, and implementing urgent updates to maintain system stability and performance. By working directly

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

alongside operations and support teams, they ensure the GMS remains reliable, responsive, and fully aligned with the immediate needs of the event environment.

On-site GRS Product Team (OsGRSPT) monitors system performance and user experience, ensuring accurate real-time results, medal standings, and official reports. They act as the primary point of contact for functional issues, coordinating with technical teams to resolve problems quickly and maintain service continuity under peak loads.

On-site GRS Development Manager (OSGRSDV) provides technical support, monitors system health, and resolves defects in real time. They ensure data synchronization across venues, maintain uptime, and apply emergency fixes when required to guarantee uninterrupted service and accurate results delivery.

3.3.4 Post-Event

Project Manager (PM) is responsible for overseeing and coordinating all post-event activities to ensure a smooth and compliant project closure. This includes managing the schedule and resources for the final data export, ensuring ad-hoc status reports are prepared and delivered to stakeholders, and verifying that all system closure activities are completed in line with contractual and quality requirements. The project manager ensures risks are mitigated, approvals are obtained, and all deliverables are formally accepted, while maintaining clear communication with the client and internal teams throughout the closure process.

GMS Delivery Manager (GMSDM) is accountable for the operational execution of all GMS-specific post-event tasks. Responsibilities include coordinating and validating the final data export for accuracy and secure transfer, producing reports and ad-hoc updates, executing system closure procedures, deactivating or archiving GMS components in compliance with data protection requirements, finalizing documentation, and capturing lessons learned to inform future events.

GRS Product Owner (GRSPO) oversees analytics and reporting, ensuring official result books and historical data are generated, validated, and archived. They review feedback, capture lessons learned, and update the roadmap to incorporate improvements for future editions.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

4 MAINTENANCE AND SUPPORT PROCESSES

Bornan will offer hypercare and support services under the following criteria:

- Support includes bug fixing and minor enhancements necessary to ensure system stability and usability.
- Development of new functionalities is excluded, unless Bornan, at its sole discretion, decides to include additional features without cost to the Client.

Any requests beyond the defined scope will require a separate agreement and may incur additional charges.

5 PROJECT MANAGEMENT

5.1 Approach and Methodology

Framework and Approach:

Bornan applies a robust framework of internationally recognised standards, proven methodologies, and structured project management processes to ensure the successful delivery of projects. This disciplined approach provides a clear governance structure, minimises risks, enhances quality, and promotes effective communication — ultimately ensuring the achievement of project objectives and stakeholder satisfaction.

Standards and Methodology:

To guide our processes, we align with the PMBOK® Guide (Project Management Institute) and the ISO 21500 standard, tailoring their principles to the specific needs of the project. Our delivery model follows a mixed life cycle approach:

- Waterfall methodology is applied to phases with well-defined requirements and scope, ensuring sequential execution where each phase's deliverables are validated before progressing.
- Agile practices are introduced in subsequent stages to enable flexibility, iterative development, and rapid response to evolving needs.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

Collaborative Tools and Systems:
Bornan employs a suite of secure, industry-leading tools to manage documentation, communication, planning, and issue tracking:

- **Microsoft Office 365**
    - SharePoint – Centralised repository for documentation and catalogue management, with controlled access, versioning, and change control.
    - Microsoft Teams / Outlook – Secure communication platform supporting calls, video meetings, remote desktop sharing, and integrated messaging.
- **Monday.com** – Used for planning, reporting, and tracking as part of our Project Management Information System (PMIS). Recognised globally as a top-tier project management tool, it offers customisable boards for status tracking, timelines, stakeholder-specific views, task ownership (with contact details), Gantt charts, dashboards, and integration with multiple applications.

Adaptability:
While Bornan brings proven systems and processes, we remain fully adaptable and will integrate with any reporting or project management tools designated by the client to ensure seamless collaboration.

5.2 Bornan Staff

Bornan Sports Technology relies exclusively on highly qualified staff with vast experience in the sports IT and management fields. Our staff has participated in many sporting events such as multiple Olympic & Paralympic Games, Asian Games, Pan-American Games, Commonwealth Games, etc, and come from well-known companies in the sector with several years of experience working for Organizing Committees at an Olympic level. In addition, our staff is certified in Project Management (like PMP ® and Google PM), Sports Management (studies and MBAs), etc.

This provides Bornan with the right knowhow to deliver an exceptional quality of service.

As a provider of sports technology services, we have solid experience working with Main Sports Stakeholders in the market acting as integrator for top class multisport events.

Bornan has successfully delivered many multisport and renowned single-sport events where IT security and data integrity were elements of major importance to Bornan and its clients. While composing our project management team, elements such as experience, interpersonal relations, communication skills, technical certifications and qualifications

Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

were elements considered. All Key Staff assigned to the project are valuable employees, with considerable experience in the company, and with a satisfaction to deliver, and provide sincere gratitude to our clients.

5.3 Change Management Process

Bornan applies a structured, standardised change management process to ensure that any modification to the approved project baselines including scope, costs, and schedule. All change requests are formally documented, evaluated for impact, and authorized by the designated authority before implementation. Approved changes are integrated into the project plan, tracked through configuration management, and recorded in the change log to ensure transparency, traceability, and control throughout the project lifecycle.

5.3.1 Step 1: Change Identification

The objective of this step is to identify and document any change request to the approved project baselines.

- Change requests may be raised at any point in the project lifecycle by any authorized stakeholder.
- Requests can be submitted formally via a Change Request Form or identified during project meetings because of decisions, issues, or risks.
- All change requests are logged into the Change Log within the PMIS (Monday.com).

5.3.2 Step 2: Change Assessment, Prioritization and Action Recommendation

The purpose of this step is to:

- Confirm whether the request constitutes a formal project change.
- Identify potential options to address the request.
- Assess the impact of each option on project objectives, quality, risk, schedule, cost, effort, and contractual obligations.
- Determine the priority level for implementation.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

For this assessment, the project manager with subject matter experts will meet to evaluate the level of the change and its impact in the service like:

- Impact on onsite or remote personnel needed.
- Impact on the user interface.
- Impact on integration activities.
- Impact on business and data logic.
- Impact on database structure.
- Impact on program code.
- Change in service level.
- Impact on other systems.
- Impact on testing activities.
- Overall complexity.

The level of the change, taking in account the information received so far, will be based on the following table:

Level	Change	Example
1	Project stoppage or severe impact on the approved/agreed project baseline items including scope, schedule and budget has occurred; a solution is needed immediately.	Creation of a new report using a new method.
2	Work stoppage or severe impact on the approved/agreed project baseline items including scope, schedule and budget is imminent; A solution needed before impact occurs.	Creation of a new report using the previous system.
3	Medium impact on the approved/agreed project baseline items including scope, schedule and budget is expected; a workaround has been identified, and a solution is needed with medium to low urgency.	Modification of an existing report to accommodate new requirements with information that was not previously gathered or calculated.
4	Low impact on the approved/agreed project baseline items including scope, schedule and	Modification of an existing report to accommodate

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

	budget is expected; a solution is needed with medium to low urgency. Also, any other items not covered by Priority Levels 1 through 3.	new requirements with information already gathered and calculated.

Table 3: Level of Change

The assessment will also consider whether the change introduces new risks, issues, or quality requirements.

5.3.3 Step 3: Change Review and Submission

The project manager, in collaboration with the project sponsor, reviews all change requests to ensure completeness, accuracy, and alignment with project objectives before submitting them to the designated approval body, as agreed between Bornan and the client, for final evaluation and decision.

5.3.4 Step 4: Change Approval

Decisions on change requests follow the evaluation procedure and may result in one of four outcomes: Approve, Reject, Postpone, or Merge.

- All decisions are recorded in the change log.
- Requests requiring clarification are returned to Step 2 for reassessment

5.3.5 Step 5: Change Implementation

For approved or merged changes, the project manager updates all relevant project documentation (plans, logs, checklists) and incorporates the change into the project schedule and deliverables.

5.3.6 Step 6: Change Monitoring and Control

The project manager monitors the implementation of approved changes, tracks progress in the PMIS (Monday.com), and reports status updates during project status meetings. This step also includes:

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

- Identifying any new changes arising during implementation
- Ensuring alignment with project objectives and baselines
- Communicating change status to all relevant stakeholders

This change management process ensures that all changes are systematically evaluated, approved, and implemented in a controlled manner, safeguarding project objectives while maintaining transparency, accountability, and stakeholder confidence.

5.4 Risk Management Process

Effective risk and issue management is critical to the successful delivery of any project. Bornan adopts a proactive approach i.e. anticipating, planning, and mitigating potential risks before they impact delivery. Issues are addressed promptly, but our focus is on early identification and prevention to minimise disruption.

Our process follows recognised best practices and is fully aligned with project management standards. It includes the creation of a Risk Management Plan, continuous risk identification, qualitative and quantitative assessment, definition of mitigation and contingency actions, and ongoing monitoring and control throughout the project lifecycle.

The Risk Management Plan will define:

- How risks will be identified, assessed, and prioritised
- The tools and techniques to be used
- Evaluation scales and tolerances
- Roles and responsibilities for risk management
- Frequency of risk reviews and updates

The primary tool for this process is the risk register, which documents each risk, its assessment, and agreed response actions. For this event, Bornan will use collaborative boards in Monday.com to track and manage risks in real time, with visibility shared across all relevant stakeholders. If required, we can adapt to any official tool designated by the client.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

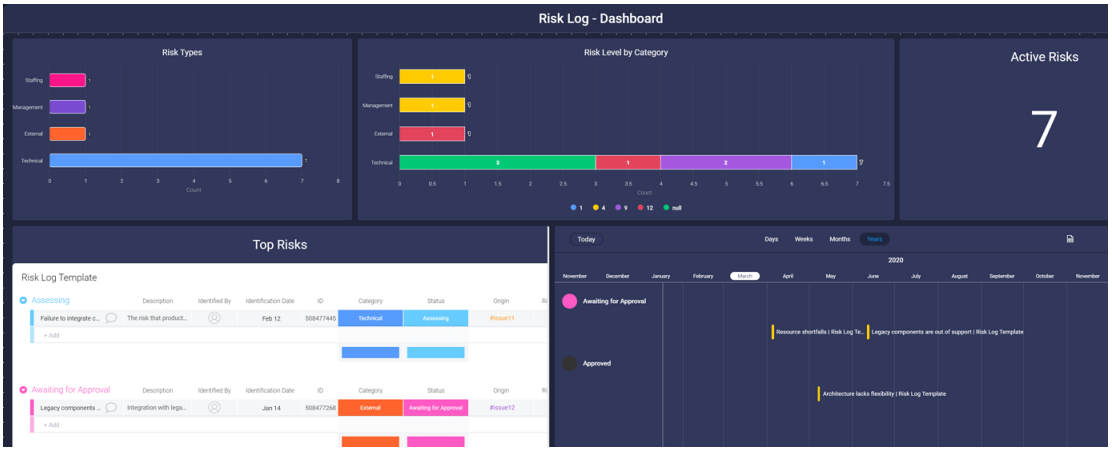

Figure 17: Risk Register/Log Dashboard

The project risk management process defines the activities to identify, assess, prioritise, manage, and control risks that may affect the execution of the project and the achievement of its objectives. Bornan works on a four-step process that may be executed when required throughout the project lifecycle.

5.4.1 Step 1: Risk Identification

Risks are identified and documented from project initiation through to event closure. The risk register will capture:

- Risk ID, name, and description
- Category and owner
- Likelihood, impact, probability, and severity
- Recommended strategies, actions, and timing

Risks are be categorised by topic (e.g., Technical, Commercial), status (Active/Closed), and recommended action (Accept, Avoid, Mitigate, Escalate, Transfer). Response plans are developed for each risk, outlining actions to take before and during the project.

Main AGIS Provider contract signature		Medium	2	High	3	6	Red	66.6%	Transfer	1.- Waiting to Steering committee
N° Sport per City		Medium	2	High	3	6	Amber	66.6%	Accept	1.- Update forecast of the staffing plan and th...
Marketing contact and rights activation		Low	1	Low	1	1	Amber	11.1%	Mitigate	1.- Try to identify the contact as soon as posible. 2.- Start to negociate the package of rights. 3.- Analyse the activations and proceed
GMS Requierements		Low	1	High	3	3	Amber	33.3%	Accept	
Number of Sports		Low	1	Medium	2	2	Amber	22.2%	Accept	
a		N/A	true	N/A	true		N/A		N/A	

Figure 18: Risk Log Template

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

5.4.2 Step 2: Risk Assessment and Prioritisation

Each identified risk is assessed for likelihood and impact on project objectives. The combination of these factors determines the risk level, which is used to prioritise response planning.

Evaluation scales and tolerances will be agreed with client. A RACI (Responsible, Accountable, Consulted and Informed) matrix will be developed to define stakeholder responsibilities for each risk.

5.4.3 Risk Response Development

For each risk, the most appropriate response strategy will be selected based on:

- Risk level and type
- Potential impact on schedule, cost, and quality
- Cost-benefit analysis of the response

Risk response strategies may include: Mitigate, Avoid, Transfer, or Accept. For accepted risks, contingency plans will be prepared. Actions will be documented in the risk register, scheduled, assigned to a risk owner, and incorporated into the project plan. The project manager remains accountable for ensuring that risk responses are implemented and monitored throughout the project lifecycle, in alignment with the risk management plan.

5.4.4 Step 4: Risk Control

Risk owners will monitor assigned risks, track the implementation of response actions, and report status updates during project review meetings. The project environment will be continuously reviewed for new risks or changes to existing ones, with the risk register updated accordingly.

This structured risk management process ensures risks are managed proactively, issues are resolved efficiently, and project objectives are protected. By combining preventive planning, real-time monitoring, and stakeholder transparency, Bornan safeguards delivery quality and minimises the likelihood of disruption.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

5.5 Issue Management Process

While risk management focuses on potential future events, issue management addresses problems that have already occurred and are impacting the project's objectives, scope, schedule, cost, quality, or stakeholder satisfaction. Bornan applies a structured, transparent, and collaborative approach to ensure issues are identified early, assessed accurately, resolved efficiently, and documented for continuous improvement.

Objectives:

- Ensure all issues are captured, categorized, and prioritized in a timely manner
- Assign clear ownership and accountability for resolution
- Maintain visibility for stakeholders through regular updates and reporting
- Prevent recurrence by capturing lessons learned and updating processes

Tools & Communication

- Monday.com boards are configured to provide a collaborative, real-time view of all open issues, their status, and responsible owners.
- Custom dashboards are shared with the LOC and other approved stakeholders to ensure transparency.
- Bornan will adapt to any official issue-tracking tool designated by the client to ensure seamless integration with local processes.

5.5.1 Issue Identification & Logging

Any team member, stakeholder, or partner can raise an issue at any stage of the project. Issues are recorded in the issue log within the PMIS (Monday.com), or in the LOC's designated tool.

Each entry includes but not limited to:

- Unique issue ID
- Description and category (e.g., Technical, Operational, Commercial)
- Date raised and originator
- Impacted deliverables or objectives
- Initial severity and priority rating

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

5.5.2 Issue Assessment & Prioritisation

The project manager assesses the severity, urgency, and potential impact on project outcomes. Issues are prioritised based on their effect on critical path activities, contractual obligations, and stakeholder requirements. High-priority issues are escalated immediately to internal and external stakeholders or relevant decision-makers.

5.5.3 Issue Resolution Planning

A resolution strategy is defined, including corrective actions, responsible owner, required resources, and target resolution date. Where necessary, alternative solutions are evaluated for feasibility, cost, and schedule impact. Dependencies and potential knock-on effects are considered to avoid creating new issues.

5.5.4 Implementation & Monitoring

The assigned issue owner implements the agreed resolution actions. Progress is tracked in real time via the PMIS (Monday.com), with status updates visible to all relevant stakeholders. The project manager monitors progress to ensure timely closure and escalates if deadlines or quality standards are at risk.

5.5.5 Closure & Documentation

Once resolved, the issue is formally closed in the issue log, with a summary of actions taken and verification of resolution.

Lessons learned are documented and fed into the project's continuous improvement process, updating procedures or preventive measures where applicable.

This structured approach ensures that issues are addressed quickly, transparently, and effectively, minimizing disruption to tournament operations and safeguarding delivery quality. By combining clear ownership, real-time tracking, and stakeholder visibility, Bornan ensures that issues are not only resolved but also prevented from recurring in future occasions.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

5.6 Quality Assurance Management Approach

The Quality Assurance Manager (QAM) will be responsible for establishing, implementing, and maintaining a robust quality management framework to ensure that all deliverables including services, documentation, and system outputs — meet or exceed the agreed standards set by the client and the organization. This approach covers the full project lifecycle, from pre-event preparation through live operations to post-event review, and is designed to ensure consistency, compliance, and continuous improvement.

- **Quality Process Design & Implementation**
  Develop and execute comprehensive QA processes covering pre-event testing, live event monitoring, and post-event evaluation. These processes will be tailored to the project's scope, risk profile, and stakeholder requirements, ensuring that quality is embedded at every stage.

- **Continuous Improvement**
  Identify areas for enhancement through structured reviews, performance metrics, and stakeholder feedback. Implement corrective and preventive actions to address root causes, improve efficiency, and strengthen quality outcomes.

- **Team Leadership & Capability Development**
  Lead, train, and mentor a team of QA/QC specialists, ensuring they have the skills, tools, and guidance to operate effectively in dynamic, high-pressure environments, particularly during live events.

- **Quality Management Plan (QMP)**
  Maintain a formal QMP that defines:
  - Quality metrics and acceptance criteria before client delivery and after client testing
  - Risk, issue, and change logs
  - Traceability matrices to ensure all requirements are met
  - Training and documentation processes for operational staff
  - Formal review and approval checkpoints at each project phase

- **Version Control & Configuration Management**

  Implement rigorous version control processes for software, documentation, and other deliverables. Utilize industry-recognized tools — such as SharePoint for documentation and GitHub for source code — to track changes, manage multiple versions, and ensure alignment with project baselines. All deliverables will include

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

version control reports detailing recent changes, ensuring transparency, accountability, and traceability.

This structured approach ensures that quality is not an afterthought but a core project driver. By combining preventive measures, real-time monitoring, and post-event analysis, the QAM will safeguard the integrity of deliverables, maintain compliance with contractual and regulatory requirements, and deliver measurable value to the client.

Below are some examples of quality management boards from previous events.

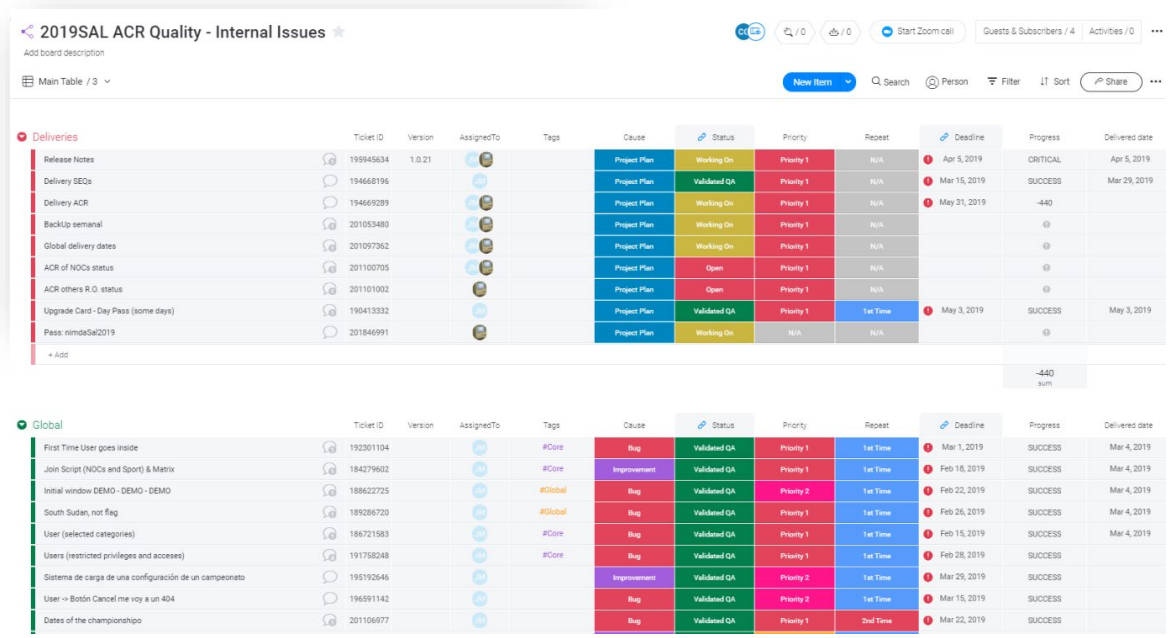

Figure 19: Quality Internal Issues Register

Effective issue tracking and management is essential to achieving project objectives and maintaining delivery quality. At Bornan, the issue/defect log is configured within Monday.com, providing a collaborative, real-time communication platform accessible to testers, developers, designated responsible parties, and approved external stakeholders. This centralised approach ensures that all issues are logged, prioritised, and resolved efficiently, with full visibility across the delivery team.

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

Custom dashboards are shared with the client and other relevant stakeholders to provide up-to-date status information, highlight critical items, and support informed decision-making. The use of Monday.com boards enable transparent tracking of issues from identification through resolution, ensuring accountability, traceability, and alignment with project timelines and quality standards.

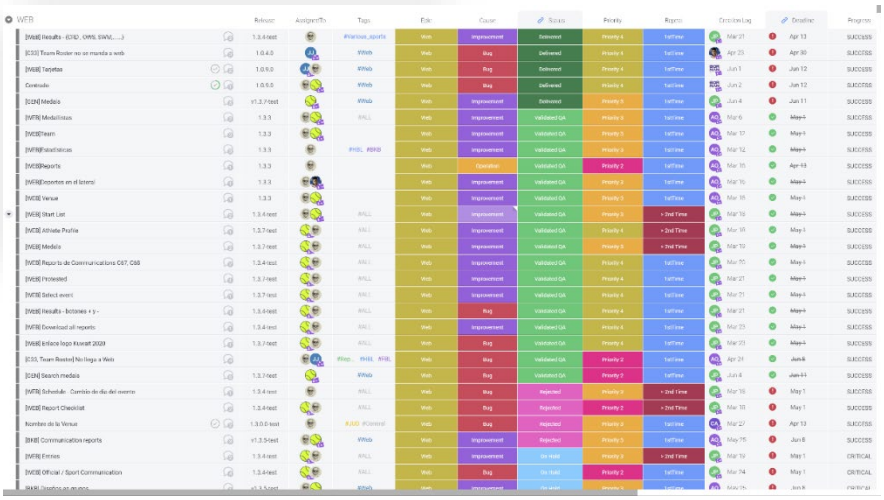

Figure 20: Issue Log Board

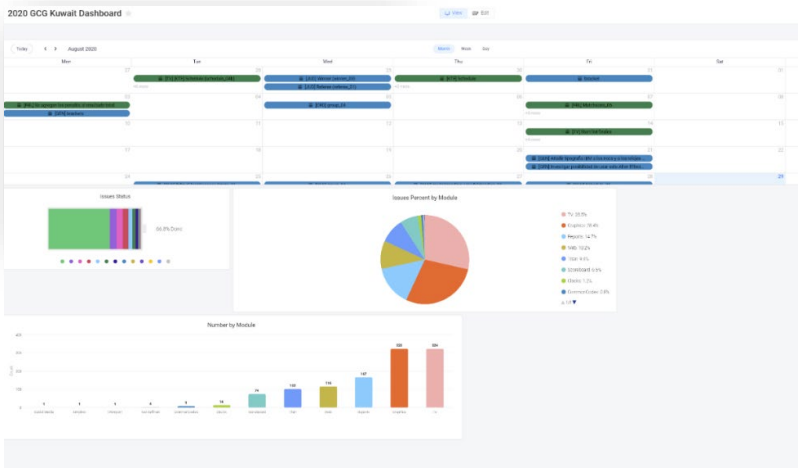

Figure 21: Log Linked to Dashboard Detail

Bornan will seamlessly adapt to and operate within any reporting tool designated by the client, ensuring full compatibility and efficient information exchange.

It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

6 COMMERCIAL PROPOSAL

6.1 PRICING PROPOSAL

Taking into consideration the information included in the Technical Solution section, the price proposal is as follows:

Item	Price (€)
Setup and Launch	~~59.490,61 €~~ Included as VIK
Annual Maintenance of the services/Hypercare and Infrastructure – to be paid by WMS	101.740,43 €
Event - Small - Development/Customization/Configuration (per event) – to be paid by Organizing Committees	37,695.40 €
Event - Medium - Development/Customization/Configuration (per event) – to be paid by Organizing Committees	48,156.33 €
Event - Large - Development/Customization/Configuration (per event) – to be paid by Organizing Committees	97,537.77 €
Event - Extra Large - Development/Customization/Configuration (per event) – to be paid by Organizing Committees	110,237.61 €
Rate Card - Support - Daily Rate	In Rate card table below
Year 1 (Setup and Launch + First Year Maintenance and Infrastructure) – to be paid by WMS	101,740.43 €
Following years: 2-10 (Maintenance and Infrastructure) to be paid by WMS	**101,740.43 €+ Inflation**

- ***Notes:**
  - Event-related costs are variable and will be invoiced based on the actual number and type of events during the agreement period.
  - Historical Results are a one-off cost for the look and feel customization. The data mapping cannot be estimated without a previous analysis on IMGA's historical results documents.

These prices are excluding withholding taxes or/and any other deductions that may apply.

The fees and prices applicable to the services provided by the Supplier under this Agreement shall be adjusted annually in accordance with the year-on-year inflation rate

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

published by the Swiss Federal Statistical Office (FSO/BFS) through the Swiss Consumer Price Index (CPI) (Landesindex der Konsumentenpreise – LIK).

https://www.bfs.admin.ch/news/en/2026-0005

Bornan is willing to offer marketing in cash and VIK in exchange of visibility and becoming a partner of IMGA. Any marketing rights are to be later discussed and agreed in detail.

Payment Milestones:

#	Item	%	Price (€)
1	Year 1: At the signature of the contract	50%	50,870.22 €
2	Year 1: 6 months after the signing contract	50%	50,870.22 €
3	At the beginning of each year (year 2 to 10)		101,740.43 € + Inflation

Example: Payment Milestones (per Event): Small Event

#	Item	%	Price (€)
1	At the signature of the event contract	50%	18,847.70 €
2	At the end of the event	50%	18,847.70 €
	Total Price	**100%**	**37,695.40 €**

For IMGA's first event—regardless of its type or size—Bornan requires to manage this initial event in full alignment with our established standards, with Bornan staff present on-site as a mandatory condition.

Rate Card Support	Remote (Business hours - 8h)	On-Site*
Profile/Level	**Daily Rate (€)**	**Daily Rate (€)**

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

1 Man-Day GMS Delivery Manager	194,46 €	623,21 €
1 Man-Day GMS/WebResults Developer	293,91 €	830,98 €

NOTES BELOW

- Remote Rate Card is considering effort done in Spanish business hours, from Monday to Friday and from 9pm to 5pm CET
- Onsite Rate Card is considered working onsite 10 hours a day.
- Not included Flights and Travel days
- Accommodation and Local transport to be provided by LOC/IMGA

Recommended On-Site Support Estimated Per Event			
		GMS	Digital Products
Event Sizing	# of Estimated Athletes	On-site Staff: GMS Delivery Manager	On-site Staff: GMS/WebResults Developer
Small	up to 1,000	3	2
Medium	up to 3,000	4	3
Large	up to 26,000	6	4
Extra Large	Above 26,000	8	6

If an alternative type of event is required, including but not limited to regional competitions such as the Asia Pacific Master Games, the Client agrees to apply the Rate Card corresponding to Large Events or any other applicable category as specified by Bornan.

Example: On-Site Support Cost: Small Event

Staff Total	Daily Rate (€)	Total 7 days (5 event days + 2 travel)
3 GMS Delivery Managers	623,21 €	13,087.41 €

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
It is permitted to disclose the information only to those of its employees and/or professional advisors who need to have access to it, and IMGA will notify such employees and/or professional advisors of the terms of this understanding only to the extent required to enable them to carry out the evaluation.
Regardless of the case, it is not allowed to disclose the information contained in this document to any party not expressly mentioned on the prior statements.
In connection with the information contained herein, no representation or warranty, expressed or implied, as to the accuracy or completeness or as to the reasonableness of any assumption which may be contained in such information is given or made.

2 GMS/WebResults Developers	830,98 €	11,633.72 €
Total for On-Site Support (Small Event):		**24,721.13 €**

6.2 TO BE PROVIDED BY LOC / IMGA (NOT INCLUDED IN THE PROPOSAL)

ACCOMODATION & LOCAL TRANSPORT (if on-site support is provided):

- Accommodation: Individual rooms with full board and internet access will be provided for Bornan staff. All hotels must be official establishments with a minimum rating of 3 or 4 stars according to international standards. Hotel nights will be supplied by the LOC to Bornan and utilized based on the competition schedule and venue locations. The final number of nights will depend on the number of services and sports included in each event.
- Local transportation with drivers will be provided for Bornan staff, covering airport transfers, daily travel between hotels, competition venues, and other necessary locations (e.g., technical meeting sites).

OFFICIAL EVENT WEBSITE AND SOCIAL MEDIA ACCOUNTS:

- The official website of the games is under the IMGA's responsibility (event info, daily news, photos, newsletter, etc.), as well as any social media accounts and their management.
- This website needs to be linked to Bornan's Web Results site for the live scoring, schedules, medals, etc., and link to the mobile Apps.
- Support for the integration of Bornan WRS inside IMGA's website

REQUIRED MATERIALS AND TECHNICAL DATA:

IMGA must provide the following materials and data in advance:

- Bornan will receive third party's Venue Results Systems' (VRS) data in SDF format to integrate into Bornan's Web Results page.
- Official graphic assets: color palette, pictograms, IMGA logos, Games logos.
- Updated Common Codes for all sports.

VENUE RESULTS SYSTEMS (VRS) / ON VENUE RESULTS (OVR):

The commercial information contained in this document is strictly confidential and must not be disclosed to any other person by IMGA or by any of its employees without the prior written consent of **Bornan Sports Technology S.A**
Similarly, the information must not be further reproduced and must only be used by IMGA for the purpose of the evaluation of the proposal.
